**POSITION POSTING:** Full stack Ruby-on-Rails developer  
**Location:** London, full-time

Please submit your CV with salary expectations to [piers@neudata.co](mailto:piers@neudata.co)

## COMPANY

Neudata is headquartered in London and operates globally. We help sophisticated investment managers find new data sources, alternative data, that can provide unique, timely and granular records of often imperceptible economic activity. Neudata's alternative data expertise lies in uncovering unique datasets from non-conventional sources that are not available on established and commonly used data platforms. We deliver our service via our 'Scout' online platform and expert consultancy.

The Neudata team and its global data-scouting network have been at the forefront of data innovation for asset management. We work with hedge fund clients worldwide who manage more than \$7tn in assets.

Our next phase of growth requires that we establish an internal development capability to extend the existing platform and to develop new products that serve a wider market.

## ROLE DESCRIPTION

We are looking for full-stack Ruby-on-Rails developers. But, more than this, we're looking for developers who can help to shape a technical culture that can support our ambitious growth plans. That's a culture which values technical excellence, which doesn't cut corners, which thinks about the long term, but which delivers. A team culture of high expectations and mutual respect.

## ROLE RESPONSIBILITIES

- Gaining a clear understanding of the needs of our users
- Designing, implementing, testing and delivering features, from front to back
- Thinking up-front about deployment and production support
- Supporting the products in production
- Instrumenting the application and understanding exactly how it is used
- Establishing and extending our development tooling
- Contributing to the strategic tech roadmap and to individual product roadmaps
- Establishing, with the CTO, an agile and effective product development process

## REQUIREMENTS

- Commercial experience of full-stack Ruby-on-Rails development. Experience of multiple projects is preferred
- Demonstrable UI design skills
- Experience with cloud service providers (AWS, Google Cloud, Azure)
- Ability to work in the UK

We are committed to attracting, developing, and advancing the most talented individuals regardless of their race, sexual orientation, religion, age, gender, disability status or any other dimension of diversity.

This is a fabulous opportunity to be part of an innovative start-up which is at the centre of a data driven paradigm shift in the Asset Management and FinTech industries.

## COMPENSATION

- Base salary and bonus dependent on previous experience
