

Japanese Speaking Analyst

*This is an exciting opportunity for anyone who is keen to join a London-based team tasked with communicating with some of the largest and most sophisticated users of alternative data in the world. To apply, please submit a CV and cover letter detailing your motivation for applying to Neudata. **Applications without a cover letter will not be considered.***

COMPANY

Headquartered in London, with offices in NYC and Shanghai, Neudata is the only objective and neutral data scouting service that is dedicated to finding alpha-generating data for investment managers. In just four years, Neudata has grown to be the number one provider of data scouting services to investors globally, and is now gearing up to continue its rapid growth by launching new products, and entering new market segments and verticals.

Neudata's Software as a Service (SaaS) catalogue of 5000+ dataset reports provide tools for users to easily search, source, compare and manage the best global alternative data providers, while leveraging real-time insights from its team of expert research analysts based in London, New York and Shanghai.

JOB DESCRIPTION

We are seeking a Japanese speaking individual to join Neudata's Research Team in London to help service our investment clients. The role will primarily entail:

- Conducting in-depth research on alternative data vendors and datasets.
- Writing research reports on alternative datasets and industry trends.
- Interacting with our client base, primarily through research calls and emails.

We believe one of the most appealing parts of this role is that Neudata's market position allows the candidate to exercise their own independent thought and critical opinion.

YOU MUST HAVE

The successful candidate will have strong written and communication skills - a large part of this role involves talking to both data buyers (by communicating our findings via research reports and calls) and sellers (to understand the properties and potential use cases of different datasets). The candidate is also expected to be fluent in Japanese, given part of their role will involve communicating with data sellers based in Japan.

The candidate is **not** required to have any advanced knowledge or experience of data science. Rather, we are looking for someone with a hunger to learn about the alternative data market and eagerness to help discover new, under the radar datasets for investment users.

Preferably but not crucially, the candidate will have experience in investment management, or providing a service to this industry. Any prior knowledge of the alternative data market is also a plus, although not required.

COMPENSATION

- Competitive base salary and bonus scheme.
- Paid study leave and volunteering days.
- Flexible WFH and office-based work.

Applicants must be eligible to work in the UK, and should be available immediately or ASAP. Please submit your CV with a cover letter to hr@neudata.co.
